Contribution Statement: Project Milestone 1

Name: Abraham Eapen, QA & DevOps Lead **Team:** Internal Jobs Board Portal (Ketan Verma, Aditya Pothuri, Abraham Eapen)

1. Personal authorship

- I ran two of the team's five interviews, **INT-04** (hiring manager, [senior manager, technology governance]) and **INT-05** (internal applicant, product manager). Both were in person in the week of 2026-11-02. For both, I wrote the interview questions (Guide A and Guide B in `docs/interviews/questions.md`, revised from our proposal's Appendix C) and the handwritten raw notes of the interviewees' answers. These notes are the source for `docs/interviews/INT-04.md` and `docs/interviews/INT-05.md`.
- I made every project decision the AI tool asked me for:
- the INT-01 to INT-05 numbering;
- the "No items" proposal follow-up;
- the Python + FastAPI + pytest stack;
- building S-1 (status pipeline) and designing S-3 (ranking);
- the gap-check method and approving each build task;
- the scope changes (S-14 below the cut line, S-12 kept below it, moves out of Offer made a non-goal);
- the public-repository redactions;
- the participation details.

2. AI-assisted authorship

All of the following were produced with Claude Code (Claude Opus 5.5, `claude-opus-5-5`) on 2026-11-09. I reviewed each item and approved it before it was committed.

Artifact	LEDGER entries
Transcription of the team's five sets of interview notes into P-numbered files; compliments and predictions list; lesson paragraph	1
Evidence log (24 E, 7 A, 9 Q)	2
Backlog (stories, INVEST, acceptance criteria, ranking and cut line; now S-1 to S-14 and AC-1 to AC-20)	3, 17
Design docs `S-1.md` and `S-3.md`, later trimmed to two pages	4, 17
Gap checks of both design docs (run in a separate subagent) and their adjudication	5, 6, 17
`README.md`, `AGENTS.md`, `requirements.txt`, `pytest.ini`	7
Acceptance tests written before the code (AC-1 to AC-4 passing; AC-6 to AC-8 skipped)	8
Build plan `docs/plans/S-1-plan.md` and the bounded-task prompts	9
S-1 code in four bounded tasks (`src/jobsboard/pipeline.py`, `api.py`)	10, 11, 12, 13
Traceability matrix, report builder, report PDF, this statement's drafts	14, 15
Ledger SHA roll-ups and fixes	16, 19
Fixes from the audit against the handout and proposal: Q-4 narrowed, S-14, scope changes in `docs/proposal_followup.md`	17
Participation table and interview headers, filled from my answers	18, 21
Public-repository redactions and the git-history rewrite to my GitHub no-reply email	20

3. Review

- **AI tool's work.**
- **Build plan.** Before each of the four bounded tasks, I read the agent's plan and approved it. I approved striking three steps from the build plan that were not asked for: a `GET /applications/{id}` endpoint, a `moved_at` timestamp, and an `Offer → Rejected` move that depends on open question Q-3.
- **Edge cases.** In the edge-case checks I reviewed after Task 1, unknown application IDs and same-stage moves returned HTTP 500 instead of the 404 and 409 the design doc specifies. Both were fixed in Tasks 2 and 4 (LEDGER entries 11 and 13).
- **Audit.** I asked the agent to audit the repository against the handout and the proposal. It found that the design docs exceeded two pages, that AC-16 quietly settled part of Q-4, and that two proposal scope items were changed without being recorded. I made the decisions that resolved each one (LEDGER entry 17).
- **Sensitive data.** I asked about data sensitivity before publishing, and approved generalizing identifying details and rewriting the commit history (LEDGER entry 20).
- **Evidence log.** I compared the 15 E entries that come from my own interviews against my INT-04 and INT-05 notes: E-1 to E-4, E-8 to E-10, E-13, E-14, E-16 to E-20, and E-24. I have not personally checked the 9 E entries that come from INT-01 to INT-03 (E-5 to E-7, E-11, E-12, E-15, E-21 to E-23); they need a check by Aditya or Ketan against their own notes.
- **Teammates' work.** I reviewed Aditya Pothuri's INT-01 and INT-02 notes and Ketan Verma's INT-03 notes. I found minor gaps:
- INT-02 has no closing "who else should we talk to?" answer.
- INT-01 and INT-02 used a role-specific question set rather than our shared Guide A.

I confirm that this statement is accurate, and that I can explain any part of the submission I am credited with.
